

## ENVIRONMENTAL POLICY

At SCANTECH we see ourselves as an integrated part of the society, therefore we feel a great responsibility towards the environment and our surroundings. As a supplier of glue, adhesives, sealants, joints and industrial products, we work actively to ensure that the company is constantly undergoing permanent improvements. To fulfil current legislations and regulations is for us a minimum requirement.

- We shall choose environmental friendly products and constantly search for better alternatives for both the environment and the working milieu.
- Through the education of our customers we ensure quality, reliability and a good working environment. We shall prevent pollution at both our customers and at SCANTECH.
- In the long term we will reduce our emissions of greenhouse gases from our activities.
- Waste should be taken care of according to the recycling principles.
- We shall with the cooperation of our customers and suppliers, develop our product assortment to maintain the position as the leading alternative on the market.
